

New slide index. Index is zero based.

Display title(e.g. Home, dashboard)

Tab content, which we need to render as html

dont save this data to the server, just use to change the user interface

Left column is fixed 320px. Right one is responsive and fits the screen size.

## Add your own tab

index:

title:

Html content:

Content

Add

collapse

Analogue for collapse button from <http://msdn.microsoft.com/en-us/library/ff921348.aspx>

tabs number and order can change

Home

Dashboard

About

Contact

Display content here.

Home and dashboard content can be fetched via <http://jquery-lab.herokuapp.com/data>

Here is the example how to perform co-request to get this data

<http://plnkr.co/edit/pJSSYBovcUmy1sO1RZFK?p=preview>

You can add any static content for other tabs.

Add loader to indicate tab loading process for home and dashboard. Use jquery.animate to play with text transparency or smth, it's up to you.
